ABSTRACTED-PUB-NO: DE19647458A

BASIC-ABSTRACT:

A multi-layered elastic sheet has at least two porous, fibrous outer layers, e.g. non-wovens of polyolefin fibres, and at least one central layer consisting of linearly applied adhesive strands. The adhesive is a thermoplastic which is elastic at room temperature. The adhesive strands (3) are applied in a grid shape which allows for elastic extension under tension and subsequent retraction.

Also claimed are processes for applying an adhesive by printing processes or by extrusion.

USE - The sheet is used as absorbent material for sanitary wear, e.g. panty liners, nappies, incontinence pads.

ADVANTAGE - Greater comfort is obtained due to elastic properties and intermittent application of adhesives which allows the fabric to breathe.
